## Latest Training News from Inatech

### New Oracle BI Suite Courses

#### Build Repositories – 4 Days

Learn how to model more complex business requirements, such as dimension hierarchies, multiple logical table sources, aggregate tables, partitions, and time series data. Delegates also learn how to implement Oracle BI Server security, manage Oracle BI Server cache, set up a multi-user development environment, and use Administration Tool wizards and utilities to manage, maintain, and enhance repositories.

#### Create Reports & Dashboards – 2 Days

Learn how to create ad-hoc queries in Oracle Business Intelligence Answers and incorporate them into Interactive Dashboards. Build a simple Oracle BI Interactive Dashboard starting with basic requests created in Answers, then add more complexity including pivot tables, charts, gauges, prompts, embedded content, navigation links, and Oracle BI Publisher reports. Finally, use Oracle BI Delivers to send real-time, personalized alerts to Interactive Dashboards for subscribed users.

**Remember, all our courses can be delivered at your site and can be customized to fit your exact requirements and use your own business scenarios and data.**

### Decisions for Success – Oracle R12 Design Workshops

Our series of R12 Design Workshops will help your organisation to make informed decisions about process improvement and configuration options during the early phase of your implementation or upgrade. We explore new features and best practice in the context of your business requirements. The workshops can be run for discrete E-Business Suite modules such as iProcurement, or for complete end-to-end processes such as:

- Order to Cash
- Procure to Pay
- Accounting to Reporting

### Latest Public Course Schedule

Please turn the page to see a selection of the courses that we will be delivering during the next few months.
